

TRUSTMRR.COM

The database of verified startup revenues

A self-serve marketplace where founders sell profitable SaaS, apps, and digital businesses — and every revenue number is proven, not promised.

200K

monthly visitors

\$1.5B+

verified revenue tracked

53M

transactions verified

A bootstrapped exit shouldn't feel like begging strangers to trust a screenshot

Every founder-owned SaaS has a moment when it's time to sell. Most marketplaces ask buyers to take the seller's word for revenue, growth, and churn. TrustMRR removes that leap of faith.

Unverified listings

Screenshots and self-reported numbers buyers can't check

Stripe, RevenueCat, Superwall & Creem-verified revenue, refreshed hourly

NDA theater

Basic proof locked behind paperwork before a buyer can even look

Core proof is visible early — private docs stay private, dead calls disappear

Marketplace bloat

Committees, advisors, and monthly software-style fees

One solo-founder-run product: fast, simple, flat pricing

A marketplace to buy and sell SaaS, apps & digital businesses

1

Browse & acquire

Explore live listings with revenue, MRR, price, and multiple shown up front — no login wall to see the basics.

2

List & sell

Founders connect a payment provider, verify revenue, and publish a listing buyers can trust from the first click.

3

Track the market

Public stats, leaderboards, and a startup "Olympics" turn raw revenue data into a live view of who's growing.

4

Build on the data

A public API, an MCP server, and an llms.txt file let developers and AI agents query verified startup data directly.

Proof first. Everything else follows.

Revenue you can verify, not read

Every listing connects to Stripe, RevenueCat, Superwall, or Creem. Numbers are pulled from the source and refreshed hourly — not typed in by the seller.

A public data layer, not just listings

Stats, leaderboards, a Domain Rating index, Revenue-per-line-of-code, tech-stack rankings, and a country "Olympics" — the data is the product, not a side page.

No NDA wall on the basics

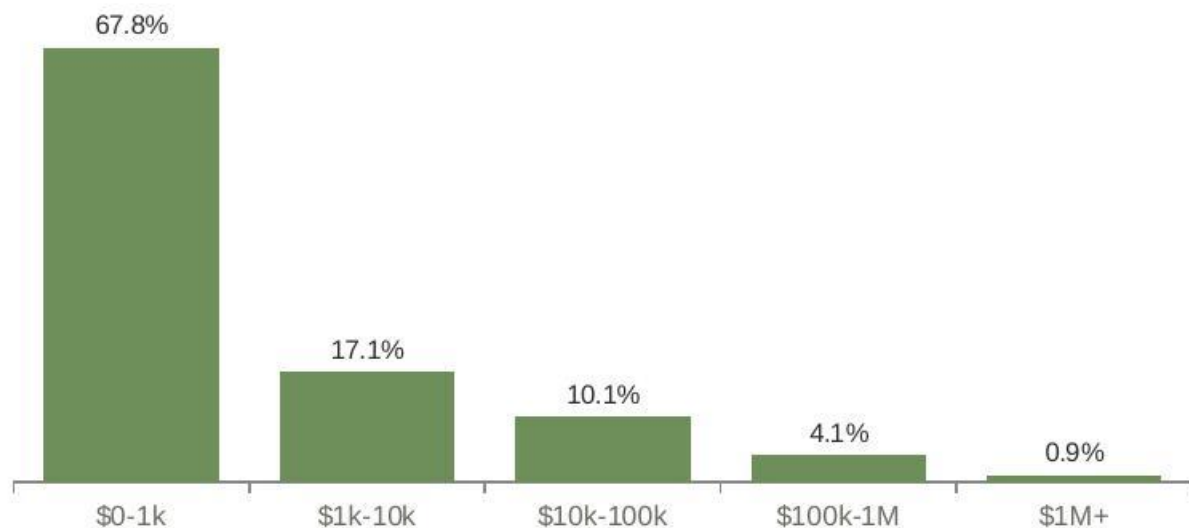

Proof that a business is real stays visible before a buyer signs anything. Private diligence docs stay private — but dead calls and guesswork disappear.

Solo-founder speed, not VC bloat

Built and run by one person (Marc Lou) with no outside funding, no committee, and a track record of shipping fast, focused products.

What 53M verified transactions reveal

Revenue distribution across all tracked startups

Most listed businesses are early — real proof matters most below \$10k MRR.

What correlates with higher revenue

$r = 0.48$

Older startups trend toward higher total revenue

$r = 0.43$

Revenue climbs as Domain Rating increases

$r = 0.28$

Revenue trends higher as founder ✕ followers grow

80%

of startups grew revenue faster than their follower count

Verified revenue, tracked across the world

Top countries by verified revenue

Most profitable categories (avg. revenue per startup)

1	E-commerce	\$538.6K
2	Security	\$480.4K
3	Content Creation	\$277.3K
4	Analytics	\$115.7K
5	Education	\$67.0K

Data verified hourly across Stripe, RevenueCat, Superwall, Creem, Paddle, LemonSqueezy, Whop, Polar, DodoPayment & Shopify.

Real founders, real milestones, in real time

TrustMRR's live feed turns growth into a public record — small wins and big exits, posted as they happen.

Stan

\$3,569,654 MRR

Built by Vitalii Dodonov to let people make a living and work for themselves — the marketplace's #1 tracked business by revenue.

LLM Gateway

+236% growth (30d)

An open-source API gateway for routing and tracking usage across OpenAI, Anthropic, and other LLM providers — the fastest-growing listing this month.

Speel.co

0 to \$1M ARR in 3 months

An AI UGC-video generator for ads and social, launched in October and now listed for sale after rapid early traction.

TryPost.it

Crossed \$500/mo

A solo founder's public feed post marking the exact moment a brand-new product turned its first meaningful revenue.

COMMITMENT

Run by a founder, not a fund

TrustMRR is built and operated by Marc Lou with no VC money and no committee. The same person who ships the product also sells on it — which keeps the roadmap tied to what founders actually need, not what a growth team thinks will raise the next round.

- Basic proof of revenue stays visible before a buyer signs anything
- Private diligence documents stay private — no forced public exposure
- Flat, transparent pricing with no monthly software-style tax
- The product stays simple by design — no slow drift toward enterprise bloat

Marc Lou

Solo founder, TrustMRR

Also builds:

ShipFast · CodeFast · DataFast
ZenVoice · GamifyList · Stalkr

*A track record of shipping small, focused products fast —
TrustMRR follows the same playbook.*

A public data layer, built to be queried

TrustMRR's verified revenue data doesn't stay locked in a UI. Every number a buyer can see, a developer or an AI agent can query directly.

1

Public API

REST endpoints for listings, verified revenue, categories, and rankings — build your own dashboards or research on top of live marketplace data.

2

MCP server

A native Model Context Protocol server exposes TrustMRR's data to AI agents, so they can look up verified revenue as part of any workflow.

3

llms.txt

A structured, machine-readable summary of the site's content, so language models can cite TrustMRR data accurately, without guessing.

Every endpoint reads from the same hourly-verified revenue feed that powers the marketplace — nothing built for developers is a second-class copy.

FOUNDER SPOTLIGHT

From pivot to acquisition-ready — tracked in public

Gojiberry AI is one of the founder stories TrustMRR's public feed was built for: a small team that pivoted, found a working channel mix, and reached profitability in the open.

- **Pivoted with purpose**
The product changed direction until it found real demand — the kind of hard reset most marketplaces never let a buyer see.
- **Grew on multiple channels**
Distribution didn't lean on one source — organic, community, and paid channels were combined to compound growth.
- **Reached profitability in the open**
Revenue was connected to a verified payment provider, so growth was provable, not just claimed.
- **Listed acquisition-ready**
With verified numbers already public, buyers could start diligence from proof instead of a cold pitch.

Founder story, TrustMRR

STATUS

Verified revenue · Public feed ·
Acquisition-ready

“A track record built in public counts for more than a pitch deck.”

Proof-first, not ecosystem-first

Broader platforms like StartuPage bundle in investor matching and wider ecosystem tools. TrustMRR stays narrow on purpose: one job, done with verified proof.

Revenue proof	Self-reported figures, taken on trust or behind an NDA	Stripe, RevenueCat, Superwall & Creem-verified, refreshed hourly
Platform scope	Broad ecosystem: investor matching, community, and extra tooling (e.g. StartuPage)	Narrow and deep: one marketplace built entirely around verified revenue
Access to basics	Core details gated behind sign-up or paperwork	Revenue, MRR, price and multiple visible before any login
Who runs it	Larger teams, committees, or VC-backed roadmaps	One solo founder, shipping fast with no outside funding

Buy with proof. Sell with trust.

Every listing on TrustMRR is backed by hourly-verified revenue — so founders can sell without begging for trust, and buyers can move without a leap of faith.
