36 COMPANIES

CAN CONTENT CREATION WIN THE ATTENTION ECONOMY?

An analysis of every Content Creation company in the dataset — what they sell, who pays, and where the money actually lands.

\$3.35M

LIFETIME REVENUE

\$200,472

COMBINED MRR

6,072

ACTIVE SUBSCRIPTIONS

The bottleneck moved.

Nobody in this dataset is selling the ability to make content. They're selling the ability to make enough of it — fast, cheap, and without a camera.

75%

of all recurring revenue in the category is captured by the 15 companies whose core pitch is volume and speed.

THE BOTTLENECK IS NO LONGER CREATION — IT IS THROUGHPUT

COMPANIES BELOW \$500 MRR

TOP FIVE COMPANIES HOLD 53% OF CATEGORY MRR

A category, or a lottery?

Thirty-six companies split \$200,472 of monthly recurring revenue. The average earns \$5,569. The median earns \$1,254. That gap is the whole story.

COMPANIES BY MONTHLY RECURRING REVENUE

Creators are the volume. Businesses are the margin.

MEDIAN REVENUE PER SUBSCRIBER, PER MONTH

2.4x

A business subscriber is worth more than twice a creator subscriber — but there are less than half as many sellers chasing them.

Everyone sells speed. Almost nobody sells judgement.

Grouping all 36 companies by the problem they claim to solve produces five clusters — and a startling imbalance in what the market will pay for.

Six companies sell intelligence — feedback, compliance, podcast and audience analytics. Between them they hold 3% of the category's recurring revenue.

SHARE OF CATEGORY MRR BY PROBLEM CLUSTER

The ladder beats the giveaway.

Thirteen companies lead with a free tier. Fourteen lead with a priced ladder. The ladder earns 2.4x more per subscriber.

MEDIAN MONTHLY REVENUE PER SUBSCRIBER, BY PRICING MODEL

WHERE THE MONEY LANDS

Stripe 72%

26 companies

RevenueCat 17%

6 companies

Polar 8%

3 companies

Dodo Payments 3%

1 company

Six companies bill through RevenueCat — meaning one in six of these businesses is a phone app, not a web tool.

Revenue spikes. Subscriptions don't.

Fourteen companies grew revenue last month. Only eight grew recurring revenue. The difference is the category's central weakness: one-off purchases wearing a subscription's clothes.

20 of 36

companies have existed for under a year — their lifetime revenue and their trailing-twelve-month revenue are the same number.

Four numbers that decide the category.

75%

of recurring revenue goes to companies selling volume. Craft, insight and analytics split the remainder.

53%

of category MRR sits inside five companies. The other thirty-one share less than half.

2.4x

the revenue per subscriber when the buyer is a business rather than a creator.

8/36

companies grew recurring revenue last month. Retention, not acquisition, is the binding constraint.

A third of the category is already for sale.

Eleven of thirty-six companies are listed for acquisition. Between them they hold 52% of the category's monthly recurring revenue — the sellers are the winners, not the stragglers.

CONTENT CREATION DOESN'T WIN THE ATTENTION ECONOMY. IT TAXES IT.

The answer is no — and that is the good news.

Not one of these 36 companies earns money by holding attention. Every dollar comes from someone else's attempt to hold it.

Sell the ladder, not the shovel.

Tiered B2B pricing earns 2.4x per subscriber. Free-tier creator tools earn volume and churn. The economics are already decided.
