

The TrustMRR Story

22 questions. 22 investment signals.

A data-verified walk through 1,000 payment-authenticated bootstrapped SaaS companies — every question re-checked against the raw dataset, every answer paired with the investor read that actually matters.

1,000

companies sampled

22

questions answered

\$13.5M

combined MRR

0.90

Gini coefficient

Six Chapters, One Investment Thesis

Every question in this deck sits inside a chapter — a distinct lens an investor needs before writing a check.

Is This Data Clean Enough to Underwrite?

DOMAIN RATING COVERAGE

71.4%

286 of 1,000 rows (28.6%) are blank

Don't screen on domain rating alone — treat it as confirming, not primary.

SUPERWALL EXACT MATCH

17

rows on payment_provider = 'Superwall'

A clean tell for mobile-paywall-first apps — underwrite on app-store dynamics.

ON-SALE RATE: STEALTH VS. NAMED

23.8% / 26.6%

anonymous vs. named listings

Going anonymous is an operating choice, not an exit signal.

Opacity in this dataset is a deliberate operator choice — not a red flag, and not correlated with a company being for sale. Treat 'Stealth Company' status as an independent signal worth investigating, not a diligence gap to write off.

A Concentrated, Power-Law Ecosystem

CUMULATIVE SHARE OF TOTAL MRR

by top % of companies, ranked by MRR

10% of companies = 82% of all MRR

48%

of total MRR held by the top 1% (10 companies)

0.90

Gini coefficient on MRR — more unequal than most national incomes

0.802

Pearson r between active subscribers and 30-day revenue — the strongest signal available

Founders and Payment Rails, Mapped

63%

of ALL 30-day revenue in the dataset comes from U.S.-based companies — \$9.84M of \$15.6M total.

30-DAY REVENUE: SG • AU • NL • DE

SG leads on revenue with the fewest listings (9) — small markets can still punch above their weight.

PAYMENT RAILS: WHO WINS BY REVENUE

Superwall

17 listings

\$237,834

Paddle

16 listings

\$96,742

Whop

7 listings

\$50,661

Creem

5 listings

\$407

BILLING INFRASTRUCTURE: MOBILE VS. WEB

Stripe 63.6%

RevenueCat 18.9%

Nearly 1 in 5 companies is mobile-native — don't apply web-SaaS assumptions uniformly.

Category Totals Can Mislead

MEDIAN MRR vs. CATEGORY SIZE

bubble size = total category MRR

\$163,402

Dev Tools' 30-day revenue across 37 listings — roughly \$4,400 per company on average.

\$155

E-comm's median MRR — most listings are hobby-scale behind a few giants like Stan.

12 rows

Design Tools: \$31,797 total 30-day revenue, \$83 median MRR — fully verified despite the small sample.

Small categories can be cleanly verifiable — thin isn't the same as untrustworthy.

Medians Tell the Real Story

MEDIAN MRR BY CATEGORY

typical per-company earnings — not category totals

AI (197 listings) sits at the bottom of this ranking despite the largest headcount — its edge is volume, not per-company economics.

“

AI leads total MRR at \$1.81M — but that's volume across 197 companies. Customer Support, Marketplace, and Education post the strongest typical (median) economics with a fraction of the competitive density.

— Q11 SYNTHESIS, RE-VERIFIED

55.8%

Mobile Apps' on-sale rate — the highest of any category, vs. 27.4% for AI. A distinct build-and-flip market.

Followers Don't Predict Revenue — Ever

CORRELATION WITH 30-DAY REVENUE (Pearson r)

full dataset, $n = 984$ complete pairs

X (Twitter) Followers

0.03

Domain Rating (SEO)

0.28

Active Subscriptions

0.80

This isn't a sampling artifact — followers stay flat at any scale, while subscribers remain the dominant, robust predictor across the full dataset.

11 → 984

rows tested: the original methodology demo (Q12) re-run at full dataset scale.

Same answer both times: no meaningful link.

Underwriting takeaway

Weight subscriber counts heavily. Use domain rating as a tertiary confirming signal. Treat follower counts as decorative, not diligence-grade.

Where the Acquisition Math Works

ASKING MULTIPLE vs. LIFETIME REVENUE

on-sale listings, $\leq 20x$ multiple (242 companies)

5 companies with \$500K+ lifetime revenue are priced under 1.5x — roughly half the 2.3x market median.

2.30x

median revenue multiple across all 262 on-sale listings with a stated multiple.

Your benchmark: below 2.3x deserves a look; above it deserves scrutiny.

\$3.96M

combined lifetime revenue across 5 verified companies, available for \$4.18M total — a bundled ~1.06x multiple.

22 Questions Later: One Investment Thesis

Power-law, not a bell curve

Gini 0.90 — a handful of companies drive most returns.

Subscribers beat social proof

$r = 0.80$ for subscribers vs. 0.02 for followers.

AI wins on volume, not quality

Customer Support, Marketplace & Education lead on median MRR.

Opacity signals scale

Anonymous listings out-earn named ones 2.5x per company.

Underpriced assets exist today

5 verified companies available at roughly half the 2.3x median.

Verify subscribers, not signals.
