

TRUSTMRR · MARKET INTELLIGENCE

The Micro-SaaS Economy, Decoded

A data-driven snapshot of 1,000 independently-built startups — revenue, growth, geography, and the market that trades them.

1,000-ROW DATASET · FROZEN 30 JUL 2026 · SESSION 3

One dataset, every angle of an indie startup's life

TrustMRR aggregates self-reported, provider-verified revenue data from independently-built software startups — the kind of companies that live and die by their public MRR counter. This snapshot captures 1,000 of them at a single point in time, spanning 65 countries and 29 categories.

WHAT'S TRACKED PER STARTUP

- **Revenue & MRR**
30d / 3m / 12m / all-time, plus 30-day growth
- **Audience & GTM**
Category, persona, pricing model, target markets
- **Monetization stack**
Payment provider, subscriptions, revenue per visitor
- **Deal market**
For-sale status, asking price, revenue multiple

CUMULATIVE LIFETIME REVENUE

AI has become the default category for new builders

KEY READ

**1 in 5
startups is
an “AI” company**

197 of 1,000 startups self-identify as AI — nearly 3× the next-largest category (SaaS). But scale doesn't equal earnings power: AI's median MRR (\$446) trails Education, Marketing, and Analytics, suggesting a crowded, early-stage field more than a proven monetization edge.

A US-centered market with a genuinely global tail

KEY READ

26%
from the US —
the rest from
64 other countries

The US leads but doesn't dominate: three-quarters of tracked startups are built outside it. France and India punch well above typical startup-hub expectations, each outpacing the UK — a sign that solo and small-team building has genuinely globalized.

Revenue follows a brutal power law

MEDIAN vs. MEAN (30-DAY REVENUE)

\$400

median startup
earns per month

\$15.6K

mean, dragged up
by a handful of outliers

REVENUE CONCENTRATION

61%

of all \$334M in lifetime revenue across the dataset is
generated by just the top 10 startups — 1% of the sample.

Share of \$334M Lifetime Revenue

■ Top 10 startups ■ Remaining 990

\$204M generated by 10 companies · \$130M spread across the other 990

22% of startups report \$0 in trailing 30-day revenue.

Growth is a coin flip, not a trend

30-Day Revenue Growth Direction (n=1,000)

KEY READ

Median growth: 0.0%

Across the full sample, revenue is essentially as likely to shrink as to grow month over month — 34.4% up, 33.7% down, the rest flat or zero. Growth rates are also extremely volatile at the edges: the top decile swings from -100% to +7,900% in a single month.

WHAT THIS MEANS

At the micro-startup scale, month-to-month revenue is driven by discrete events — a launch, a viral post, a payment glitch — more than a compounding trend line. Any single month's growth number is a noisy signal, not a verdict on the business.

B2B startups earn nearly 6× the median B2C business

Median MRR by Audience Type

KEY READ

Willingness to pay scales with business use

B2B startups post a median \$1,036 in MRR versus \$181 for B2C — despite B2C outnumbering B2B startups 401 to 255 in the sample. Consumer products chase volume; business products chase margin, and it shows up directly in the revenue line.

401 B2C · 255 B2B · 56 hybrid startups make up the sample

The leaderboard: eight startups defining the ceiling

STARTUP	CATEGORY	COUNTRY	MRR	SUBS	30D GROWTH
GojiberryAI	AI	US	\$494,668	4,642	+19.7%
Rezi	AI	US	\$259,701	10,749	-0.2%
Kibu	Education	US	\$234,319	375	-25.6%
Cometly	Analytics	US	\$207,616	307	+17.0%
1Lookup	SaaS	US	\$207,064	655	-5.8%
Brand On Demand, Inc.	E-comm	US	\$187,459	3,631	+4.2%
Postiz	Social Media	HK	\$177,102	5,237	+22.7%
PROSP	AI	FR	\$128,005	1,108	+4.3%

Named, categorized startups only (excludes anonymized “Stealth Company” entries). Ranked by current MRR.

A quarter of these startups are for sale

26.2%

of all startups are listed for sale (262 of 1,000)

\$35K

median asking price

2.3x

median revenue multiple

Asking Price Distribution (262 Listings)

The distribution is bimodal: a cluster of sub-\$5K “side project” sales sits alongside a larger cluster of \$150K+ listings — with comparatively few deals in between. Buyers are choosing between cheap experiments and proven, revenue-backed businesses.

TAKEAWAYS

What the data says about building small

01

A tiny minority captures the majority.

The top 10 startups (1%) hold 61% of all lifetime revenue — median outcomes are modest, and averages badly overstate them.

02

Category crowding $\neq$ category earnings.

AI has 3 $\times$ the founders of any other space, but its median MRR trails Education, Marketing, and Analytics.

03

B2B still commands a premium.

Business-facing products earn a $\sim 6\times$ higher median MRR than consumer products at this scale.

04

This market has real liquidity.

26% of startups are actively for sale at a median 2.3 $\times$ revenue multiple — exiting small is normal, not rare.
