

TRUSTMRR MARKETPLACE ANALYSIS

The Hidden Premium

Why anonymous startups earn more than named ones—and what 1,000 indie SaaS listings reveal about the micro-acquisition market

1,000 startups • 65 countries • Frozen 30 Jul 2026

THE HOOK

13% of listings, 27% of revenue

Startups listed as “Stealth Company” or “Hidden Business”—no public name, no visible identity—make up only a small slice of the marketplace by count, but punch far above their weight in revenue.

ANONYMOUS

130

startups (13%)

\$4.2M

26.9% of 30-day revenue

NAMED

870

startups (87%)

\$11.4M

73.1% of 30-day revenue

SHARE OF 30-DAY REVENUE

73.1%

26.9%

Read: named founders dominate the marketplace by sheer numbers, but stealth listings—often larger, more mature businesses shielding their identity ahead of a sale—carry outsized revenue weight relative to their count.

A US-led, AI-heavy marketplace

THE CORE RELATIONSHIP

Subscribers predict revenue—strongly

Pearson $r = 0.802$

across 736 startups with both active subscriptions and
30-day revenue reported

For a subscription-driven marketplace, this is the strongest single signal in the dataset. Traffic (visitors) and social reach (followers) are far noisier—and mostly unreported—making subscriber count the most trustworthy quick proxy for revenue when evaluating a listing.

Showing 683 of 736 startups (99th-percentile range) for readability — r is computed on the full set

THE OUTLIERS

A handful of breakouts drive the total

The median startup has earned just \$400 in the last 30 days—but the mean is \$15,596, dragged up by a long tail of breakout companies.

STARTUP	COUNTRY	CATEGORY	ALL-TIME REVENUE
Stan	US	—	\$76,627,685
Brand On Demand, Inc.	US	E-comm	\$51,152,595
Stack Influence	US	Marketing	\$26,284,476
Stealth Company	—	—	\$11,337,749
Rezi	US	AI	\$9,726,513
Cometly	US	Analytics	\$9,437,775
Stealth Company	GB	—	\$5,856,328
Stealth Company	US	—	\$4,753,822

THE EXIT MARKET

1 in 4 listings is for sale

LISTED FOR SALE

262

of 1,000 startups (26%)

MEDIAN REVENUE MULTIPLE

2.3x

among listings with a stated multiple

MEDIAN ASKING PRICE

\$35,000

across all on-sale listings

A 2.3x median revenue multiple is well below typical SaaS acquisition benchmarks (often 3–5x for larger, more established companies)—consistent with a marketplace of small, early-stage, higher-risk assets. The wide spread (0x to 300x+ outliers) means multiples should always be read alongside the underlying revenue trend, not on their own.

A NECESSARY CAVEAT

This is a partially-completed dataset

Before drawing conclusions, it's worth being upfront about coverage. Self-reported marketplace listings are inconsistently filled in—treat single-country or single-category conclusions as directional, not exhaustive.

TAKEAWAY

Anonymity is a signal, not noise.

- Stealth listings skew larger and more revenue-dense—likely pre-exit businesses protecting their identity, not hobby projects.
 - Active subscriptions is the single most reliable revenue proxy in this dataset ($r = 0.802$); prioritize it over followers or traffic when screening listings.
 - The market is US- and AI-heavy, but nearly a quarter of listings carry no country or category tag—worth fixing before this data drives real decisions.
 - At a 2.3x median multiple, most listings price as small, early-stage assets—treat higher multiples as outliers requiring extra diligence.
-
