

DECISION BRIEF

The TrustMRR Startup Landscape

TrustMRR is a public marketplace where indie SaaS and micro-startup founders list their startups for sale or list their live revenue metrics for credibility — this dataset is a snapshot of 1,000 of those listings.

What 1,000 listed startups reveal about where revenue, growth, and value concentrate — and what to do about it.

1,000 startups · 65 countries · 29 categories · Snapshot frozen 30 Jul 2026

Executive Summary

The headline numbers behind this dataset

1,000

Startups analyzed

\$15.6M

Combined 30-day revenue

\$282

Median MRR

\$13,472

Average MRR — 48x the median

26%

Currently listed for sale

65 / 29

Countries / categories represented

The gap between \$282 median and \$13,472 average is the whole story: a handful of breakout startups skew every raw average in this dataset. Every comparison ahead uses medians.

Category Landscape: Crowded ≠ Profitable

Where founders are building vs. where the money actually concentrates

Most crowded categories (by # of startups)

Same 8 categories, ranked by monetization (\$)

Takeaway: AI has 3x more listings than any other category (197), but ranks 3rd in median MRR (\$446). Marketing (42 startups) and Content Creation (36) monetize better with far less competition. Education — outside the top 8 by count — has the single highest median MRR of any category at \$2,142.

Geography: Where the Revenue Is

Volume and revenue quality don't always move together

Startups by country (top 8)

Median MRR by country (\$)

US	\$1,263	Deepest market — volume + revenue
CA	\$919	Small but high-value base
BR	\$666	Emerging, above-median value
FR	\$435	High volume, modest MRR
DE	\$230	Steady mid-tier
GB	\$153	High volume, lower MRR
IN	\$5.97	Highest volume of low-MRR listings
HK	\$0	Early-stage / pre-revenue cluster

Takeaway: The US leads on both dimensions — most listings and highest median MRR — making it the market to prioritize for both building and acquiring. India drives volume (59 startups) but at near-zero median MRR, suggesting a very different, earlier-stage or lower-price-point cohort.

B2B vs. B2C: Where to Invest

Fewer B2B startups, but each one earns dramatically more

B2C

401 startups

Median MRR

\$181

Median revenue / visitor

\$0.26

B2B

255 startups

Median MRR

\$1,036

Median revenue / visitor

\$0.90

Both

56 startups

Median MRR

\$352

Median revenue / visitor

\$0.04

Takeaway: B2B startups earn ~5.7x the median MRR of B2C and monetize traffic ~3.5x better per visitor — despite being outnumbered 401 to 255. B2C is the more crowded lane; B2B is where dollars concentrate per company.

Acquisition Opportunities

Screening the for-sale listings for cheap, growing startups

How to use this: Start with the 6 “Cheap + Growing” listings on the Deal Sourcing tab — they clear their purchase price in under a year of current MRR and are still growing. The remaining 218 with payback data are worth a second look if growth or category fit compensates for a longer payback window. Marketplace listings move fast — verify current asking price and status before any conversation.

Before You Decide: Data Quality & Caveats

This is directional intelligence, not audited financials

1 Self-reported, not audited

Revenue and MRR come from each startup's own payment provider (mostly Stripe). Treat absolute dollar figures as directional.

2 Real gaps in key fields

Built on the fields with the most consistent reporting. This analysis prioritizes revenue, MRR, and growth — the metrics founders report most reliably — over secondary fields like traffic, which fewer listings include and would only support directional, not precise, conclusions.

3 Selection bias

This is who chose to list on TrustMRR — not a random sample of all startups globally. Results skew toward founders comfortable sharing metrics publicly.

4 A moving snapshot

Frozen 30 Jul 2026. 'On sale' status and asking prices shift fast on these marketplaces — re-verify before acting.

Recommendations

Four moves this data supports directly

1

Favor B2B, and target under-crowded, high-value categories

Education, Marketing, and Analytics post the highest median MRR with a fraction of AI's competition.

2

Anchor on the US; treat India/France as volume, not value, plays

US leads on both count and median MRR. High-volume markets like India show far lower per-startup revenue.

3

Screen acquisitions on payback, not sticker price

Start with the 6 listings under 12-month payback and still growing before wider deal review.

4

Verify before acting

Marketplace status, pricing, and category tags change fast — re-confirm any listing's current numbers before a conversation.
