

>> EXECUTIVE SUMMARY

1,000 listings. A few actually buyable.

Most companies in the dataset are very small; averages are distorted by a handful of outliers. The investable path is not to buy the market — it is to buy a short list of on-sale companies with enough revenue, positive momentum, and a modest multiple.

01 · TOTAL LISTINGS

1,000

Sourcing universe. Screening tool, not a portfolio.

02 · ON SALE

262

26.2% of universe. Enough to source, most too small.

03 · MED 12M REVENUE

\$3.1k

Full dataset. Mean is \$133.8k — skew is heavy.

04 · MED MULTIPLE (ON SALE)

2.3x

Revenue multiple on live listings. Room to negotiate.

>> INVESTOR TAKEAWAY

Treat this sheet as a sourcing database. Focus capital on a very small shortlist — not the marketplace.

>> DISTRIBUTION · 12-MONTH REVENUE

The market is extremely skewed.
Use medians, not averages.

>> WHAT THE NUMBERS MEAN

A few very large businesses pull the mean up 43× above the typical company. Investors will encounter the median, not the mean.

MEDIAN \$3.1k The typical company you'll find.	MEAN \$133.8k Distorted by a few large outliers.	P90 \$215.6k Only top 10% clear this bar.
---	---	--

>> TAKEAWAY

Use medians and percentiles when setting valuation rules — not averages.

>> ON-SALE POOL · TYPICAL LISTING

Volume, yes. Institutional scale, no.

262 companies marked on sale — but the typical listing is a hobby-sized asset. A minimum size & quality screen is mandatory.

MEDIAN ASKING PRICE

\$35k

Below any institutional deal-size floor.

MEDIAN 12M REVENUE

\$8.0k

2.6× the full-dataset median — but still tiny.

MEDIAN REVENUE MULTIPLE

2.3x

Mean multiple much higher — outlier distortion again.

>> INVESTOR TAKEAWAY

Target-rich only if we impose a minimum size and quality screen. Median deal size is too small for a fund; some 0.0x multiples reflect bad or incomplete listings, not bargains.

>> WHERE THE SCALE ACTUALLY IS

Start in B2B. Don't overpay for AI.

A · MEDIAN 12M REVENUE BY AUDIENCE

B2B is ~3.8× larger than B2C

>> SIGNAL

B2B businesses show better scale at the top of the funnel — usually more room for diligence, pricing power, and buyer competition. Not proof of better returns, but a stronger starting universe.

B · CATEGORY · COUNT VS MEDIAN 12M REVENUE

Big pool ≠ big businesses

CATEGORY	COUNT	MED 12M REV	SIGNAL
AI	197	\$4.3k	▲ CROWDED
MARKETING	~60	HIGHER	• BETTER SCALE
EDUCATION	~45	HIGHER	• BETTER SCALE
DEV TOOLS	~40	STRONG GROWTH	▲ MOMENTUM
ANALYTICS	~35	STRONG GROWTH	▲ MOMENTUM

>> SIGNAL

AI is the largest bucket but the typical AI listing is small. Marketing, Education, Dev Tools and Analytics show stronger signal per company. Do not overpay for a category label.

>> SOURCING FUNNEL

From 1,000 to 3–5 real candidates.

Most opportunities fail on size, momentum or price. That means the process is working — use the sheet to find 3–5 candidates, not 50.

>> NAMED CANDIDATES · SCALE X MOMENTUM X PRICE

Three names. Two to act on, one to watch.

• PROCEED NOW · TICKER PROSP PROSP prosp.ai 12M REVENUE \$507k MRR \$128k 30D GROWTH +4.3% ASKING PRICE \$1.0m LISTED MULTIPLE 0.8x vs on-sale median 2.3x >> THE CASE Cheap relative to both its revenue base and the on-sale pool. Room for upside if revenue quality holds. ▲ VERIFY · \$1.8m + \$587k = 2.0x; sheet says 0.8x. Room for operational improvement or resale upside if revenue is real. ▲ VERIFY · Limited category / audience detail – lean on seller diligence.	• WATCHLIST · TICKER 1LKP 1Lookup 1lookup.io 12M REVENUE \$3.12m SCALE RANK LARGEST ON SALE 30D GROWTH -5.8% MOMENTUM DECLINING LISTED MULTIPLE 2.1x below median but slowing down >> THE CASE Real scale, but you are paying for size while taking a turnaround question. Not a clean buy. ▲ HOLD · Do not lead until decline is explained.
--	--	---

>> VALUATION TRAP + WHAT THE SHEET DOES NOT CONTAIN

Buy businesses. Not low multiples.

WHAT THE SHEET DOES NOT CONTAIN · RISK MATRIX

Sourcing signal ≠ full underwriting

R1 · DATA QUALITY

Stealth, incomplete, inconsistent rows

Screen-level conclusions can be wrong. Some 0.0x multiples reflect bad listings, not bargains.

R2 · OPERATING QUALITY

No margin · churn · CAC · retention · concentration

The metrics that usually decide whether an acquisition works are absent from the sheet.

R3 · VALUATION TRAP

Low multiple ≠ bargain

A cheap price can mean a broken business — shrinking, hard to transfer, or hiding operational damage.

>> SHOULD WE INVEST?

Yes. Selectively.

Pursue a narrow set of listings that combine size, momentum and price. Not broad marketplace exposure.
