

GROWTH MOMENTUM

Who's Actually Moving?

A 30-day growth read across 1,000 indie & micro-SaaS startups

Business Analysis · TrustMRR Dataset (n = 1,000) · Frozen 30 Jul 2026

THE GROWTH SPLIT

The Market Is Evenly Split — Growing, Flat, and Shrinking

344

startups grew revenue in the last 30 days

305

showed exactly 0% growth — likely untracked, not truly flat

337

startups lost revenue over the last 30 days

SIZE VS. SPEED

Bigger Isn't Faster — Growth Barely Tracks Revenue Size

READING THE PATTERN

- ▶ Median growth sits near 0% in every revenue quartile — Q4 (largest startups) edges out the rest at just +1.9%.
- ▶ Only 12 startups (~1% of the dataset) show growth above 500% — almost all are tiny accounts jumping from near-zero, not sustained momentum.
- ▶ Correlation between revenue size and growth rate is weak (Spearman ≈ 0.18) — size and momentum are largely independent stories here.

SO WHAT

Implication: Screen for Momentum Separately From Size

Treat 0% growth as 'unknown'

305 startups report exactly 0.0% growth — a suspiciously round number. Flag these as data gaps before including them in trend analysis.

Cap outlier growth rates

Triple-digit growth from a \$1–2K base is not a repeatable signal. Winsorize or exclude extreme growth for portfolio-level averages.

Screen on growth, not just size

Since size and growth don't correlate, a 'top revenue' screen will miss fast-movers. Build a separate momentum leaderboard.
