

 TRUSTMRR DEAL FLOW

Investment Screening Analysis

Screening 1,000 micro-SaaS marketplace listings for acquisition-ready targets and actionable mispricings.

PREPARED FOR
Investment Committee

DATE
August 2026

DATA SOURCE
TrustMRR Export (1,000 Listings)

Executive Summary

78 / 1k

Listings pass basic quality acquisition filter

48x

Gap between Mean (\$13.5k) & Median (\$282) MRR

27%

Shrinking MoM vs 19% growing >10%/mo

38x

Market median asking multiple on monthly MRR

- ✓ **AI Category Crowded & Weak:** AI leads volume (197 listings, 20% of market) but sits near bottom on revenue quality—supply outrunning demand.
- ✓ **Diligence Focus:** Subscriber count strongly predicts revenue ($r = 0.91$); social followers and domain authority do not ($r \approx 0.02$ – 0.21).
- ✓ **Top Targets:** Notionlytics & DropPop trade at 1–2x monthly MRR vs 38x median—the clearest price/fundamentals mismatches in dataset.
- ✓ **Seller Anchoring:** 18 declining listings are priced at 40–900x MRR—sellers anchoring on historical peaks, not current trajectory.

Dataset & Sourcing Funnel

What the Data Is

A point-in-time export from TrustMRR, a marketplace where founders list revenue-verified micro-SaaS and app businesses for sale.

- **Financial Metrics:** MRR, total revenue, growth %, active subscriptions.
- **Traffic & Marketing:** Website traffic, domain authority, social followers.
- **Deal Terms:** Asking price, multiple, and active on-sale status.
- **Verification:** Revenue pulled directly from seller's Stripe account (self-reported, non-audited).

Known Data Gaps

- **Traffic Data:** Present for only 18% of marketplace listings.
- **Category Tagging:** Missing for 27% of listed assets.
- **Geographic Location:** Country tag missing for 24% of listings.
- **Anonymized Assets:** 13% of listings (129) are "Stealth Company" records.

Screening Logic: Exclude \$0 MRR → Keep On Sale → Apply MRR ≥ \$1k, Multiple < 60x, Growth ≥ -5%/mo → Rank Diligence Priority.

Market Power-Law Distribution

\$282

Median Monthly MRR

50% of all marketplace listings sit below this line.

\$13,472

Mean Monthly MRR

Heavily skewed upwards by a small group of outliers.

\$3.57M

Highest Single Listing (Stan)

Demonstrates extreme power-law tail in the dataset.

- 🎯 **Strategic Takeaway:** This is micro-PE / search-fund territory, not venture-style upside hunting. Over **61% of total listings are sub-\$1,000 MRR "side projects"** requiring operational consolidation or turnaround rather than venture capital injection.

AI Category Dynamics

197

Listings (20% of Market)

\$446

Median Monthly MRR

AI represents the largest single category volume on TrustMRR, yet ranks in the bottom third across all categories for revenue generation.

Supply/Demand Mismatch: Category popularity and revenue quality are inversely related. Founders are launching AI wrappers faster than paying customer demand can sustain them.

Market Transparency & Blind Spots

64% Stripe Verified

Nearly two-thirds of listings feature exportable, Stripe-verified transaction histories, providing high immediate confidence during initial filter passes.

24% Missing Country

Quarter of assets lack geographic metadata. Represents potential tax, legal, and payment processing diligence friction post-LOI.

13% Stealth Listings

129 listings are completely anonymized ("Stealth Company"). Notably, two top-10 earners by MRR are stealth, requiring pre-NDA friction.

Monthly Growth Performance

Growth Insights

- **Most assets are stagnant:** 43% show exactly 0% growth—the single largest bucket in the dataset.
- **More shrinking than scaling:** 27% are actively losing revenue month-over-month compared to 19% compounding fast.
- **Screening Weight:** MoM growth rate must be the primary filtering variable, taking precedence over absolute revenue size.

Revenue Predictor Analysis

Subscriber Count ($r = 0.91$)

Extremely strong positive correlation with revenue. Paid active subscriptions are the single most dependable proxy for business health.

Social Followers ($r \approx 0.02$)

Zero statistical correlation with MRR. High follower counts on X or LinkedIn rarely translate to real customer subscription revenue.

Domain Authority ($r \approx 0.21$)

Weak correlation. High SEO scores and backlink profiles do not reliably predict active monetization in micro-SaaS listings.

Diligence Takeaway: Anchor underwriting purely on payment processor data and verified subscriber accounts. Ignore vanity audience metrics.

Four-Step Screening Methodology

i **Screening Outcome:** Out of 1,000 total listings, exactly 78 candidates warrant investment committee consideration. The top 7 high-priority opportunities are highlighted on the following slide.

High-Priority Deal Shortlist

Startup Name	Monthly MRR	MoM Growth	Asking Multiple	Asking Price	Category
Notionlytics	\$36,457	-2.9%	1.3x MRR	\$48,000	Analytics
DropPop	\$27,797	-0.3%	2.0x MRR	\$55,000	SaaS
Reloop	\$1,119	+24.3%	4.5x MRR	\$5,000	Marketing
Linkedit	\$1,036	+90.1%	4.8x MRR	\$5,000	Sales
Leadbomb	\$3,633	+38.9%	6.9x MRR	\$25,000	SaaS
Speel.co	\$65,843	0.0%	7.6x MRR	\$500,000	SaaS
Kickly – Pronos IA	\$10,236	+384.5%*	9.8x MRR	\$100,000	Games

*Note: Notionlytics & DropPop exhibit extreme price/fundamentals discount (1-2x MRR vs 38x median). Kickly growth is on a small historical base; verify in diligence.

Diligence Target: Notionlytics

\$36,457

MONTHLY MRR

-2.9%

MOM GROWTH

1.3x

MULTIPLE (VS 38X MEDIAN)

\$48,000

ASKING PRICE

Investment Case

- **Strong Category:** Analytics category features higher-than-average revenue density (median \$1,294 MRR). Notionlytics sits far above category norms.
- **Massive Mispricing:** At 1.3x monthly MRR, price implies either motivated seller or severe seller mispricing of cash flows.
- **Stable Trajectory:** Revenue decline is very mild (-2.9%/mo), unlike distressed assets.

Diligence Focus

- **Churn Drivers:** Investigate specific reasons behind mild monthly customer churn.
- **Customer Concentration:** Verify if revenue depends on top 2-3 enterprise accounts.
- **Platform Risk:** Assess API/ecosystem reliance on Notion's core platform.

Diligence Target: DropPop

\$27,797

MONTHLY MRR

-0.3%

MOM GROWTH (FLAT)

2.0x

MULTIPLE (VS 38X MEDIAN)

\$55,000

ASKING PRICE

Investment Case

- **Stable Retained Base:** Revenue is flat (-0.3%/mo), representing a highly predictable cash-flowing subscription base rather than a falling knife.
- **Top Tier SaaS Asset:** SaaS category listings average \$303 MRR; DropPop is ~90x larger than typical category competitors.
- **Rapid Payback:** At 2.0x monthly MRR, complete capital payback is under 2 months of operating cash flow.

Diligence Focus

- **Stripe Audit:** Audit payment processor dashboard directly to verify retention cohort curve.
- **Tech Infrastructure:** Confirm hosting costs, technical debt, and code maintenance needs.
- **Seller Motivation:** Confirm primary reason for rapid liquid exit at \$55k asking price.

Overpriced Declining Assets

Startup Name	Monthly MRR	MoM Growth	Asking Multiple	Category
Launch Club	\$29,100	-11.8%	103x MRR	Marketing
Yakkr Growth	\$5,452	-11.7%	138x MRR	Content Creation
Fiddl.art	\$1,691	-18.6%	917x MRR	—
BambooVPN	\$11,780	-11.4%	68x MRR	Mobile Apps
Blabla	\$10,397	-19.6%	48x MRR	AI
MON RDV PREFECTURE	\$636	-15.3%	102x MRR	SaaS

Key Finding (18 Listings Total): Sellers anchor asking prices on historical peak performance rather than current declining trajectories. **Recommendation:** Hard pass at current asking prices; reconsider only after >70% price cuts.

Critical Risk Factors & Caveats

 **1. Self-Reported Payment Processor Data**
Revenue is connected via Stripe/payment APIs but not independently audited. Direct read-only dashboard access is mandatory during formal diligence.

 **2. Marketplace Survivorship & Selection Bias**
Distressed assets are over-represented in marketplace listings. Founders sell when faced with churn, competition, or tech debt.

 **3. Anonymized "Stealth" Listings**
13% of assets (129 listings) cannot be identity-verified pre-NDA. Exclude from ranked shortlists until identity is verified.

 **4. Single-Month Growth Snapshots**
TrustMRR provides only 1 trailing 30-day growth figure. Request 6–12 months of historical Stripe logs before committing capital.

Strategic Investment Thesis

✗ NOT THIS: Venture Growth Hunting

- Betting on extreme power-law outliers to achieve venture scale.
- Underwriting unproven pre-revenue potential over verified cash flow.
- Chasing category narrative hype (e.g., AI wrappers) over underlying economics.

✓ THIS: Micro-PE Cash Flow Roll-Up

- Acquiring small, profitable, existing operating businesses at steep discounts to fundamentals.
- Filtering strictly on verified subscriber counts and processor metrics, ignoring vanity indicators.
- Prioritizing proven revenue categories (Customer Support, Analytics, Education).

Actionable Next Steps

1. Continuous Monthly Screen

Re-apply 4-step filter (MRR $\geq$ \$1k, Multiple $<$ 60x, Growth $\geq$ -5%) on newly published TrustMRR listings automatically.

2. Engage Notionlytics & DropPop

Initiate seller outreach with Notionlytics and DropPop immediately—the two assets most decoupled from market multiples.

3. Filter Out AI Hype

Enforce strict subscriber & retention thresholds for AI category listings to avoid low-moat wrappers.

4. Pre-Close Verification

Mandate 6-12 months of processor-verified financial history and read-only Stripe dashboard access prior to wiring capital.

 **BOTTOM LINE**

Questions & Discussion

TrustMRR provides a viable sourcing funnel for micro-PE strategy—provided strict, fundamentals-first filtering is enforced. Buying at unadjusted asking prices risks substantial value destruction.
