

TRUSTMRR MARKET SNAPSHOT

The State of the Indie & Bootstrapped Software Economy

An investor and board briefing on market structure, growth, and valuation benchmarks across 1,000 tracked companies.

Dataset frozen 30 Jul 2026 | n = 1,000 companies | Source: TrustMRR

EXECUTIVE SUMMARY

A large, active market — with value concentrated at the top

1,000

Companies tracked

\$13.5M

Combined monthly recurring
revenue

30

Product categories represented

26%

Companies currently listed for
sale

For investors, the picture is two-sided. AI-native products anchor category demand and a handful of breakout companies generate outsized returns — but growth is scarce market-wide, and roughly a quarter of the tracked universe is already for sale, at valuation multiples worth benchmarking before any bid.

AI leads on both company count and revenue share

COMPANIES BY CATEGORY (TOP 7)

TOTAL MRR BY CATEGORY, \$K (TOP 7)

AI represents 19.7% of all companies and \$1.81M in monthly MRR — more than 3x the next category (SaaS) on revenue. Education, Marketing and E-comm monetize disproportionately well relative to their smaller company counts.

REVENUE CONCENTRATION

Value is a power law: a few companies carry the market

TOP 5 COMPANIES BY MRR

Company	Category	Country	Monthly MRR
Stan	—	US	\$3,569,654
Stealth Company	—	—	\$747,069
GojiberryAI	AI	US	\$494,668
Stealth Company	—	—	\$364,101
Rezi	AI	US	\$259,701

Together, the top 5 companies hold roughly 40% of all tracked MRR — a reminder that portfolio-level averages can be misleading when sizing this market.

GROWTH DYNAMICS

Growth is the exception, not the rule

69%

of companies were flat or declining in the last 30 days

31%

posted positive MRR growth — 24 companies (2.4%) are in hypergrowth, up more than 100%

VALUATION BENCHMARKS

A quarter of the market is for sale — at modest multiples

262

Companies listed for sale (26.2%)

2.30x

Median revenue multiple, on-sale
cos.

\$332K

Average asking price

\$86.8M

Total asking price across listings

HOW TO READ THE MULTIPLE SPREAD

Multiples range widely (0x to 327x) and the mean (7.8x) sits far above the median (2.3x) — a small number of speculative or pre-revenue-adjacent listings skew the average. For diligence and bid benchmarking, the median is the more reliable reference point: most bootstrapped software businesses in this dataset are changing hands around 2–3x annual-adjusted revenue.

25th–75th
percentile

0.8x – 5.0x

typical range

What this means for capital allocation

1

Prioritize AI-adjacent bets

AI is the largest category by both count and revenue — the clearest signal of durable demand in this dataset.

2

Don't underwrite to averages

A 48x gap between mean and median MRR means headline averages will mislead. Use medians for realistic diligence.

3

Growth is scarce — price it accordingly

With 69% of companies flat or declining, sustained positive growth is a genuine premium worth paying for.

4

Acquisition multiples are grounded

Median 2.3x revenue for on-sale companies offers a realistic anchor for bids, exits, and portfolio marks.
