

The TrustMRR Dataset

What makes an internet business worth buying?

The Board Thesis

The Noise

The most popular startup.

The Signal

**The one that turns attention
into recurring revenue
efficiently, at a sensible price.**

TrustMRR acts as the central marketplace, connecting founders seeking liquidity with buyers seeking verifiable operating metrics. The goal: Discoverability and Comparability.

Think of every startup as a four-part business story

A strong acquisition target scores well across all four — not just one.

AI is the biggest pool of listings – but popularity is not profitability

197 AI listings
(Largest Category)

WHAT TO AVOID

Popularity $\neq$ quality. Do not chase volume alone.

WHAT TO COMPARE INSTEAD

- Median MRR
- Revenue per visitor
- Growth + valuation

The US supplies the largest pool, but the marketplace is global

**Use geography to
source — not to
decide value.**

Compare countries on
MRR, growth and
monetisation quality
before paying a
premium.

B2B businesses monetise more strongly than B2C

B2C

\$181

Median MRR

Both

\$352

Median MRR

B2B

\$1,036

Median MRR

The Economics of Willingness-to-Pay:

Would we rather own 1,000 low-value users — or 50 high-value accounts?

Recurring pricing is the strongest monetisation engine

Which pricing models monetize best?

Free Entry

Easier acquisition, lower ARPU

One-Time

Simpler sale, weaker recurring visibility

Recurring

Predictable revenue

Recurring revenue is a quality signal — if customers keep paying.

Most businesses are small — the real opportunity sits in the profitable middle

30-day revenue distribution

Action Panel

What this means

1. Don't let a few huge businesses set expectations.
2. Use revenue bands to define the target size.
3. Test whether growth is durable.

Growth $\neq$ durability

More traffic helps — but traffic alone does not create revenue

Board Question

Is the audience qualified — and can the business monetise it efficiently?

Revenue per visitor reveals which categories monetise attention best

A cheap-looking business is not automatically a bargain

ASKING PRICE

Median Reported
Multiple: 2.3x

Median Asking
Price: \$35,000

Highest multiple is a
327x extreme outlier.

RECURRING CASH FLOW

Normalise revenue
definitions.

Check growth and
churn.

Check customer
concentration.

**Don't trust a multiple without checking the denominator.
Rebuild the valuation from raw data.**

The 4 Green Lights: The ideal acquisition target

RECURRING

(Subscription /
sales-led models)

B2B

(High value
customers)

GROWING

(Positive MRR
momentum)

AFFORDABLE

($\leq 5\times$ reported
multiple)

The best targets combine four green lights — not one impressive metric.

Screening Candidates in Practice

1	Business	MRR	Growth	Multiple	Result
2	Kickly - Pronos IA	\$10,236	384.5%	0.7x	 All 4 Green Lights illuminated.
3	SetSmart	\$15,659	100.0%	0.8x	High viability.
4	Groups Watcher	\$21,423	19.7%	2.2x	-
5	Conductor	\$35,391	9.6%	3.0x	-
6	FaceKit	\$17,410	8.0%	4.6x	-

Diligence: Turn marketplace signals into verified business facts

DATA RISKS

- Marketplace selection bias exists.
- Missing/stealth fields reduce comparability.
- 30-day growth is volatile.
- Multiples are not standardized.

- 01: AI volume ≠ quality.
- 02: B2B wins monetisation.
- 03: Recurring wins
- 03: Recurring wins economics.
- 04: Efficiency beats traffic.
- 05: Price needs proof.

Bottom line: buy durable economics, not exciting headlines

For Founders	For Investors	For Acquirers
Raise customer value before chasing more traffic.	Favour recurring B2B economics + durable growth.	Screen for four green lights , then diligence deeply.

BOARD DECISION: Align on the target profile: **recurring + B2B + growing + efficiently monetised + sensibly priced.**
